
Distributed solar benefits Arizonans

Distributed solar allows Arizonans the freedom to choose where their energy comes from. It's already growing in Arizona and, with supportive policies in place, can modernize our power grid.

Distributed solar can:

- Lower electricity costs for everyone by reducing need for new powerplants and transmission lines
- Save homes & businesses money and protect them from rising energy bills
- Reduce air, water, and climate pollution by replacing fossil fuels with clean, renewable energy
- Foster a more secure, resilient, and reliable energy system
- Support Arizona's transition to electric technologies like heat pumps and electric vehicles, which can help Arizonans save more on energy
- Grow the local economy by creating good-paying local jobs
- Provide 6 to 11 times more jobs than utility-scale solar
- Employ more veteran and unionized workers than national averages

Support for distributed solar in Arizona is bi-partisan.

According to polling by the Center for Western Priorities, 78% of Arizona Voters support increased investment in renewable energy sources including solar.

SOLAR UNITED NEIGHBORS ACTION

Arizona solar by the numbers

5,984 MW
installed capacity

5th in U.S. & enough to power **1M** homes

200,000+
homes with solar installed

$135M
estimated annual energy bill savings

$13.9B
in total solar investment

296
solar companies

8,278
Solar jobs created

3.5M
metric tons of CO_2 Equivalent avoided annually

Equal to taking **745,409** cars off the road

About Solar United Neighbors Action

Solar United Neighbors (SUN) Action is a 501(c)4 non-profit organization that represents the needs and interests of solar owners and supporters in Arizona and across the country. Together with our 501(c)3 affiliate Solar United Neighbors (SUN), we help people go solar, join together, and fight for their energy rights.
