

# Distributed solar benefits Floridians

**Distributed solar allows Floridians the freedom to choose where their energy comes from. It's already growing in Florida and, with supportive policies in place, can modernize our power grid.**

## **Distributed solar can:**

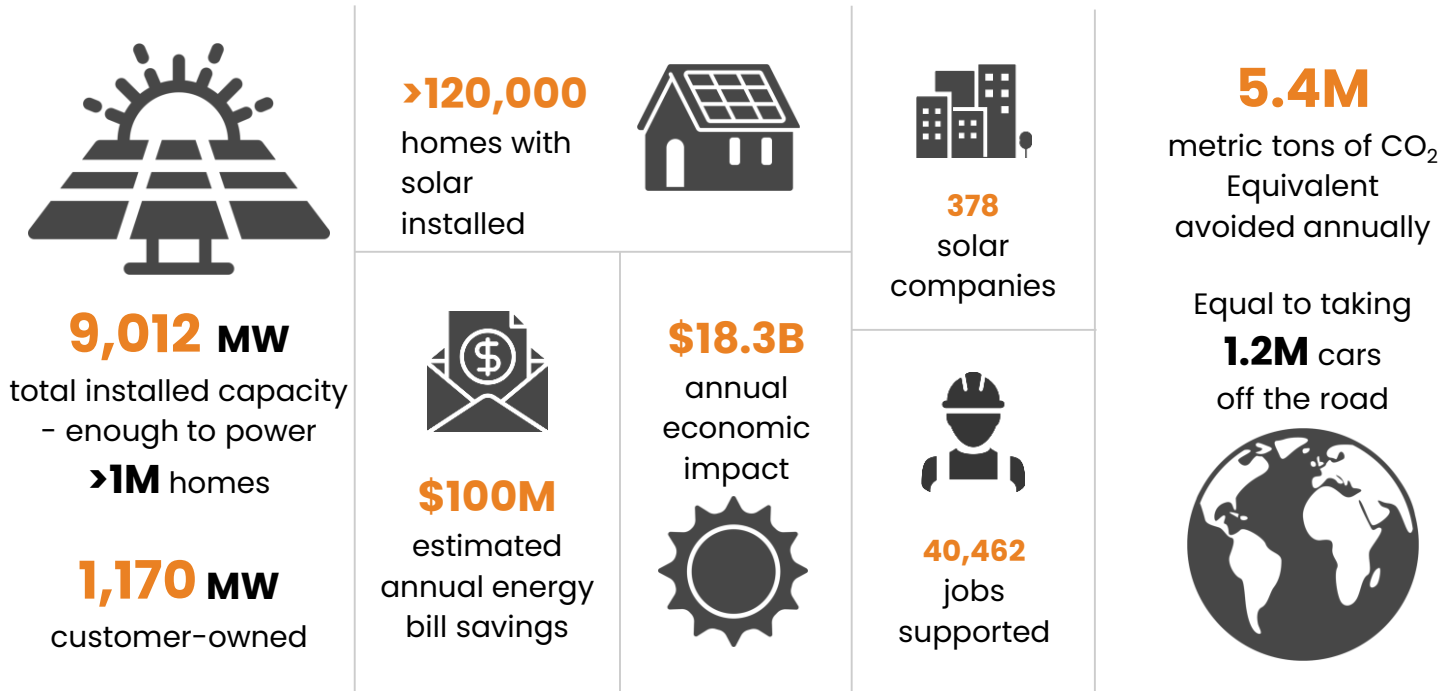

- Lower electricity costs for everyone
- Save homes & businesses money and protect them from rising energy bills
- Reduce air, water, and climate pollution by replacing fossil fuels with clean, renewable energy
- Foster a more secure, resilient, and reliable energy system
- Reduce need for investment in new power plants and transmission lines
- Support Florida's transition to electric technologies like heat pumps and electric vehicles, which can help Floridians save more on energy
- Grow the local economy by creating good-paying local jobs
- Provide 6 to 11 times more jobs than utility-scale solar
- Employ more veteran and unionized workers than national averages

**Support for distributed solar in Florida is bi-partisan.**

According to recent polls, as many as 93% of Florida voters, including strong majorities of both Republican and Democratic voters, support policies that make it easier for Floridians to go solar.

## About Solar United Neighbors Action

Solar United Neighbors (SUN) Action is a 501(c)4 non-profit organization that represents the needs and interests of solar owners and supporters in Florida and across the country. Together with our 501(c)3 affiliate Solar United Neighbors (SUN), we help people go solar, join together, and fight for their energy rights.
